

Business Sales Performance Analytics Report

1. Introduction

This project analyzes business sales performance using Power BI. The objective is to identify revenue trends, top-performing products, and regional sales performance to support data-driven business decisions.

2. Dataset Overview

- Dataset Type: Sales Data
- Records: 541,910 rows
- Fields: Product, Category, Revenue, Profit, Region, Date, Customer Information

3. Data Preparation

- Removed missing values
- Checked data consistency
- Created calculated measures using DAX
- Performed data transformation using Power Query

4. Dashboard KPIs

- Total Revenue
- Total Orders
- Average Order Value
- Profit Margin
- Top Products

5. Visualizations Used

- KPI Cards
- Bar Charts
- Line Charts
- Product Analysis
- Regional Analysis

6. Key Insights

- Top products generated the highest revenue contribution.
- Revenue varied significantly across regions.
- Seasonal trends were identified in sales performance.

7. Conclusion

The dashboard provides a comprehensive view of sales performance and supports strategic business decisions through interactive visualizations.
